

Research and precision out of tradition

HORICO® offers...

... highest quality

All our medical instruments are certified. We also go much further: every single instrument leaving our factory will undergo a microscopic control, alongside other tests. The basis of the high quality is based on our large manufacturing capacity. Just about every step of production takes place at our factory in Germany; from the raw material to the finished product. Our brand, HORICO is recognized worldwide for quality and reliability.

...Innovation

Right from the beginning we have continually developed new products to find the best solution for our customers. Many of these solutions are still in use today, such as our Stahlcarbo® strips, the company's original product. Other research & development highlights:

1918	The first separation strips not made of paper (sandpaper), but of steel.
1930	Start of diamond cutter production, which - thanks to their outstanding properties - represent our core business today.
1956	Diaflex® discs: Invention of the world's first flexible stainless steel and diamond disc with a thickness of 2/10 and 3/10mm.
1963	Diatrepano: Individually shaped diamond instruments for the machining of cavities and opening of the pulp chamber.
1974	Superdiaflex® discs, even more flexible with just 1/10 and 1.5/10 mm.

1984	Superapid®: Developing the world's first semi-flexible sintered diamond disc which did not break as quickly as conventional sintered discs did.
1986	Expansion of the Horico program to include carbide products. Meanwhile, we are also in the field of the world's top cutters with all standard tooth systems.
1998	Adoption of a 6/10 mm diameter ball for the finest work in the range.
2008	New surface coverings for cutters. The new "black" cutters are extremely successful because they combine the best cutting properties at a reduced heat with an extra-long service life.
2009	The Lion family diamond burs, our premium burs, especially designed for extremely hard materials such as glass ceramics and zircon, and any other preparation.

...reliability

We can afford quality and innovation because we are a fourth-generation family business and have over 90 years' experience in the dental industry to call upon. Our success speaks for itself. In some cases our business relationships with our dealers go back 60 years and we deliver to 80 countries. If you are looking for a bespoke customer solution, please speak to us! We are sure we will be able to convince you.
